Application notes

Application Note : March 2021

Market involved : Energy

Product : UWP 3.0

Customer : Energy Manager

Subject : Energy Audit

CUSTOMER ISSUE :

The Energy Manager needs to conduct an energy audit and possibly to operate some building automation tasks to save energy in a large chain of fast food restaurants. Remote maintenance of the system is necessary.

OUR SOLUTION :

The UWP 3.0 EDGE is the ideal solution to implement the energy audit solution first and then proceed with the building automation control, thanks to its mixed capabilities. The remote operation and centralized concentration of data is not a problem due to the connection features of the UWP 3.0

BENEFITS :

- The Energy Manager can manage the project step by step by simply configuring the necessary functions when they are needed; the remote operation preserves maintenance costs within the budget limits.
