

**Sensors**

**Switches**

**Controls**

## Application notes

**Application Note : March 2021**

**Market involved : Building Automation**

**Product : UWP 3.0**

**Customer : Building owner, Facility Manager**

**Subject : Saving time and energy costs in buildings with lighting control**

### CUSTOMER ISSUE :

Building owners need to implement systems to monitor energy consumption while controlling the lighting, so as to achieve the optimal energy efficiency rating for the buildings.

### OUR SOLUTION :

The UWP 3.0 is the ideal solution to implement both the monitoring system for energy audit and lighting control architecture, getting the most from Dupline® and DALI® modules.

### BENEFITS :

- The building owner can use the same system to deploy both monitoring and acting control, saving time and costs during the commissioning. MAIA Cloud allows a secure remote access for monitoring and setup.
